Instructions

Read all instructions and requirements first

Use any VM creation tool that gives you root access and persistent storage

VirtualBox, Multipass, cloud (Amazon, Google, Azure, etc) (Docker won't be an option here)

Create a hostname relevant to the assignment (i.e., test-individual)

Create a user of your ucid with a password, ensure relevant permissions

Hardware: 1GB Memory, 10GB Hard Drive

Install a server version of linux (i.e., Ubuntu Server 24.04)

Hint: You may want to get a base install working and use that as a cloning point for quicker destroy/create cycles

Get the sample code from the `main` branch at <https://github.com/MattToegel/IT490-2026>

Connect to one VM with two separate ssh connections

Run the `RabbitMQServerSample.php` file successfully in one instance

Run the `RabbitMQClientSample.php` file successfully in another instance

Proper data should be sent/received

Create a `setup.sh` script that automates the installation/setup logic to get this sample working (steps needed after the installation and login of Ubuntu)

Create a branch in the format of `module02-<ucid>-individual-practice` in your team's repository (provided by the instructor)

Upload the content of the `setup.sh` script to it and the `composor.json`

Fill in the below requirements

Submit and Export once done

Upload the PDF to the branch you created above in your group GitHub repo for the class

No need to merge (Pull Request) this branch

Upload the PDF to Canvas

No need to merge (Pull Request) this branch
Upload the PDF to Canvas
You may delete any test VMs created for this assignment

Submission Progress

100%

Section #1: (7 pts.) Example Solution

100%

Section #2: (3 pts.) Reflection

100%

End of Assignment — make sure you click **Submit**.
