Instructions

Read the full assignment before starting. The **Freedom and Strict Requirements** section defines the non-negotiable constraints.

This is a group assignment. Only one person needs to submit it to Learn/Canvas, but every member must own clear work and appear in the contribution records.

Work from a dedicated branch in the group repository, such as **auth-core**.

Use GitHub Issues to plan and track the milestone. Break the work into separate issues for setup, MQ contract, registration, login, session persistence, logout, authorization checks, and verification. Split tasks further as needed. Each issue must have a clear owner identified by name, GitHub username, and UCID. Keep issues linked to related Pull Request(s).

Utilize your App, DB, and MQ VMs. For all cross-VM data, send content through queues only. No direct App VM to DB VM connections are allowed.

Build the authentication and authorization workflow described below: App, DB, and MQ VM roles; role-specific setup scripts; MQ request/response messages; hashed password storage; login/session/logout behavior; protected access; and MQ-only verification.

Submit focused evidence for each task. GitHub links are for full review, while screenshots document the current important code snippets, runtime behavior, command output, and configuration at submission time.

If the same evidence already proves part of a later task, reference it instead of uploading it again. Only add new evidence when it proves a new requirement.

When a response includes person-specific reflections, decisions, and explanations, include that team member's name with the response.

For URL responses, use direct GitHub links to the relevant issue, Pull Request(s), file, and script/config requested by that task. Do not submit only the repository home page. If a URL task asks for issue tracking, include at least one issue link.

Use **N/A** only in contribution records for a member with no contribution, and still include the issue link(s) assigned

one issue link.

Use **N/A** only in contribution records for a member with no contribution, and still include the issue link(s) assigned to that member.

Evidence Standards

Use these standards for every implementation task below.

URL evidence must use direct GitHub links to the relevant issue(s), Pull Request(s), files, scripts, configs, tests, or verification notes. Linked issue(s) must show owner and scope.

Screenshot evidence must be focused. Captions must identify what is being shown.

Runtime evidence must include enough matching detail, such as timestamp, test email, correlation ID, or visible session state, to connect related steps.

Runtime evidence belongs in the task that asks for runtime behavior.

Redact secrets and sensitive data. Do not show plaintext passwords in code, logs, screenshots, terminal output, commits, or queue history evidence.

Reuse earlier evidence when it proves the same requirement. Add new evidence only when it proves a new behavior.

Freedom and Strict Requirements

Teams have implementation freedom, but the core architecture, security requirements, and team-management process are non-negotiable.

Technical freedom:

Teams may choose their app language/runtime, database product/schema details, RabbitMQ/MQ exchange and queue names, message format details, and session implementation strategy.

Teams may choose a standard password-hashing library or framework helper appropriate for their language.

Teams may split the implementation into more issues, scripts, files, services, tests, and helper programs when that makes the work clearer.

Teams may add extra user fields, password rules, protected pages, and authorization roles if the required behavior still works.

Technical restrictions:

The required roles must exist as separate VM roles: App, DB, and MQ.

These should exist from a prior assignment, the related notes are just reminders about the restrictions

Required VMs must use Ubuntu Server Minimal 24.04 with 1 GB RAM and 1 CPU.

Each VM must install only the minimum software needed for its role.

The App VM must not connect directly to the DB VM or database service.

The App VM must not contain database credentials, database connection strings, or code that opens a database connection.

All cross-VM authentication data must move through MQ queues only. Do not use direct App-to-DB database connections, HTTP calls, SSH commands, shared folders, rsync, manual copy/paste, or any other VM-to-VM data path for registration, login, session lookup, or user data synchronization.

The DB VM must be the system that persists user account records.

Passwords must be stored as salted password hashes using a password-hashing function or library. Plaintext passwords will receive a zero for the registration task.

Plaintext passwords must not be committed, logged, printed in terminal output, shown in screenshots, or stored in queue history beyond the short-lived request needed to process the login or registration attempt (if passed through the queue).

Registration must require at least an email address and password.

Login must validate the registered email/password combo and must reject unknown emails and incorrect passwords, log specific failures, but show the user a generic invalid email or password message.

Login must validate the registered email/password combo and must reject unknown emails and incorrect passwords, log specific failures, but show the user a generic invalid email or password message.

A logged-in user session must persist between pages unless the user logs out or a reasonable expiry time is reached.

A user must be able to log out, and logout must destroy or invalidate the session.

At least one protected page, route, action, or resource must require a logged-in session so the authorization behavior can be demonstrated.

Setup scripts must be role-specific, committed to the group repository, and maintained.

Team-management restrictions:

The work must be split into GitHub Issues during planning and implementation, not reconstructed only at the end.

Each issue must have a clear owner and scope. Issue owners must be identified by name, GitHub username, and UCID.

Every group member must have an individual contribution record with assigned issue link(s), even if the entry is **N/A** because no contribution was done by the team member.

The final submission must connect issues, Pull Request(s), scripts/code, tests, runtime evidence, and member contribution records clearly enough to audit who owned which work.

Submission Progress

100%

Section #1: (7 pts.) Milestone Implementation

100%

the *Journal of the American Medical Association* (JAMA) and the *New England Journal of Medicine* (NEJM) are the most widely cited journals in the field of medicine.

The *JAMA* is a peer-reviewed journal that publishes research, clinical practice, and public health information. It is published weekly by the American Medical Association (AMA).

The *NEJM* is a peer-reviewed journal that publishes research, clinical practice, and public health information. It is published weekly by the Massachusetts Medical Society.

Both journals are highly respected and influential in the medical community. They provide a platform for the dissemination of new research and clinical findings.

The *JAMA* and the *NEJM* are both indexed in the *Journal Citation Reports* (JCR) and the *Scopus* database.

The *JAMA* has a long history of publishing high-quality research and clinical practice information. It is a leading journal in the field of medicine.

The *NEJM* is also a leading journal in the field of medicine. It publishes research, clinical practice, and public health information.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.2 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One way to meet this demand is to increase the amount of food that is produced. This can be done by using more land for agriculture.

Another way to meet this demand is to increase the efficiency of food production. This can be done by using better farming techniques.

Both of these methods have their own problems. Increasing the amount of land used for agriculture can lead to deforestation and the loss of biodiversity.

Increasing the efficiency of food production can lead to the use of more pesticides and fertilizers, which can be harmful to the environment.

One solution is to use sustainable farming practices. These practices take into account the needs of the environment and the community.

Sustainable farming practices can help to meet the world's growing demand for food and other resources without harming the environment.

There are many different ways to practice sustainable farming. Some of the most common methods are organic farming, permaculture, and agroecology.

Organic farming is a method of farming that does not use synthetic pesticides or fertilizers. It uses natural methods to control pests and diseases.

Permaculture is a method of farming that is based on the principles of ecology. It uses natural methods to create a sustainable and self-sufficient system.

Agroecology is a method of farming that combines the principles of ecology and agriculture. It uses natural methods to create a sustainable and self-sufficient system.

These methods can help to meet the world's growing demand for food and other resources without harming the environment.

There are many other ways to practice sustainable farming. It is important to find the method that works best for your situation.

Sustainable farming is a way of farming that takes into account the needs of the environment and the community. It is a way of farming that can help to meet the world's growing demand for food and other resources without harming the environment.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One way to meet this demand is to increase the amount of food that is produced. This can be done by using more land for agriculture.

Another way to meet this demand is to increase the efficiency of food production. This can be done by using better farming techniques.

One of the most important ways to increase the efficiency of food production is to use fertilizers. Fertilizers help plants grow faster and produce more food.

There are many different types of fertilizers. Some are made from natural materials, and some are made from synthetic materials.

One of the most common types of fertilizers is nitrogen. Nitrogen is an important nutrient for plants, and it is found in many different types of fertilizers.

There are many different ways to use fertilizers. Some are applied to the soil, and some are applied to the plants.

One of the most important things to remember is that fertilizers should be used carefully. If they are not used properly, they can harm the environment.

There are many different ways to use fertilizers. Some are applied to the soil, and some are applied to the plants.

the 1990s, the incidence of *S. flexneri* has increased in the United Kingdom [10]. In the United States, *S. flexneri* has been reported as the most common serotype in children with acute bacterial dysentery [11].

There is a paucity of data on the epidemiology of *S. flexneri* in the United Kingdom. In the 1970s, *S. flexneri* was reported as the most common serotype in children with acute bacterial dysentery in the United Kingdom [12]. In the 1980s, *S. flexneri* was reported as the most common serotype in children with acute bacterial dysentery in the United Kingdom [13].

In the 1990s, *S. flexneri* was reported as the most common serotype in children with acute bacterial dysentery in the United Kingdom [14]. In the 2000s, *S. flexneri* was reported as the most common serotype in children with acute bacterial dysentery in the United Kingdom [15].

In the 2010s, *S. flexneri* was reported as the most common serotype in children with acute bacterial dysentery in the United Kingdom [16]. In the 2020s, *S. flexneri* was reported as the most common serotype in children with acute bacterial dysentery in the United Kingdom [17].

In the 2030s, *S. flexneri* was reported as the most common serotype in children with acute bacterial dysentery in the United Kingdom [18]. In the 2040s, *S. flexneri* was reported as the most common serotype in children with acute bacterial dysentery in the United Kingdom [19].

In the 2050s, *S. flexneri* was reported as the most common serotype in children with acute bacterial dysentery in the United Kingdom [20]. In the 2060s, *S. flexneri* was reported as the most common serotype in children with acute bacterial dysentery in the United Kingdom [21].

In the 2070s, *S. flexneri* was reported as the most common serotype in children with acute bacterial dysentery in the United Kingdom [22]. In the 2080s, *S. flexneri* was reported as the most common serotype in children with acute bacterial dysentery in the United Kingdom [23].

In the 2090s, *S. flexneri* was reported as the most common serotype in children with acute bacterial dysentery in the United Kingdom [24]. In the 2100s, *S. flexneri* was reported as the most common serotype in children with acute bacterial dysentery in the United Kingdom [25].

the 1990s, the number of people in the world who are under 15 years of age is expected to increase by 1.5 billion, from 1.1 billion in 1990 to 2.6 billion in 2010.

As the world's population grows, the demand for food and other resources will increase. The world's population is expected to reach 9 billion by 2050, and the demand for food will increase by 70% by 2030.

The world's population is also becoming more urban. In 1990, 54% of the world's population lived in urban areas. By 2010, this is expected to increase to 69%.

The world's population is also becoming more diverse. In 1990, 54% of the world's population was of European descent. By 2010, this is expected to decrease to 44%.

The world's population is also becoming more educated. In 1990, 54% of the world's population was illiterate. By 2010, this is expected to decrease to 44%.

The world's population is also becoming more mobile. In 1990, 54% of the world's population lived in rural areas. By 2010, this is expected to decrease to 44%.

The world's population is also becoming more affluent. In 1990, 54% of the world's population lived on less than \$2 a day. By 2010, this is expected to decrease to 44%.

The world's population is also becoming more healthy. In 1990, 54% of the world's population lived in poor health. By 2010, this is expected to decrease to 44%.

The world's population is also becoming more peaceful. In 1990, 54% of the world's population lived in a state of conflict. By 2010, this is expected to decrease to 44%.

The world's population is also becoming more democratic. In 1990, 54% of the world's population lived in a non-democratic country. By 2010, this is expected to decrease to 44%.

The world's population is also becoming more environmentally conscious. In 1990, 54% of the world's population lived in a country that was not a member of the United Nations Environment Programme. By 2010, this is expected to decrease to 44%.

The world's population is also becoming more technologically advanced. In 1990, 54% of the world's population lived in a country that did not have a telephone. By 2010, this is expected to decrease to 44%.

The world's population is also becoming more globally connected. In 1990, 54% of the world's population lived in a country that was not a member of the World Trade Organization. By 2010, this is expected to decrease to 44%.

The world's population is also becoming more environmentally sustainable. In 1990, 54% of the world's population lived in a country that was not a member of the United Nations Sustainable Development Goals. By 2010, this is expected to decrease to 44%.

The world's population is also becoming more socially responsible. In 1990, 54% of the world's population lived in a country that was not a member of the United Nations Global Compact. By 2010, this is expected to decrease to 44%.

The world's population is also becoming more environmentally friendly. In 1990, 54% of the world's population lived in a country that was not a member of the United Nations Framework Convention on Climate Change. By 2010, this is expected to decrease to 44%.

The world's population is also becoming more environmentally aware. In 1990, 54% of the world's population lived in a country that was not a member of the United Nations Convention on Biological Diversity. By 2010, this is expected to decrease to 44%.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One way to meet this demand is to increase the amount of food that is produced. This can be done by using more land for agriculture, by using more water, or by using more fertilizers.

Another way to meet this demand is to increase the efficiency of food production. This can be done by using better farming techniques, by using better seeds, or by using better fertilizers.

There are many ways to meet the world's growing demand for food and other resources. It is up to us to decide which way is best.

One of the most important things we can do is to make sure that we are using resources wisely. This means using less water, using less land, and using less fertilizer.

Another important thing we can do is to make sure that we are using the best farming techniques. This means using the best seeds, the best fertilizers, and the best farming methods.

Finally, we can make sure that we are using the best seeds. This means using seeds that are resistant to disease and pests, and that are adapted to the local climate.

By doing these things, we can help to meet the world's growing demand for food and other resources. This will help to ensure that everyone has enough to eat.

There are many other things we can do to help the world's food supply. For example, we can support local farmers, we can eat less meat, and we can reduce food waste.

It is up to us to decide what we want to do. But we must all do something to help the world's food supply.

One of the most important things we can do is to make sure that we are using resources wisely. This means using less water, using less land, and using less fertilizer.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.2 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One way to meet this demand is to increase the amount of food that is produced. This can be done by using more land for agriculture or by increasing the productivity of the land that is already being used.

Another way to meet this demand is to reduce the amount of food that is wasted. This can be done by improving the way that food is stored and distributed.

There are many other ways to meet this demand, and it is important that we find ways to do so in a sustainable way.

One of the most important things we can do is to protect the environment. This means taking steps to reduce pollution and to conserve natural resources.

Another important thing we can do is to improve the way that we use energy. This means using energy more efficiently and switching to renewable energy sources.

There are many other things we can do to meet the world's growing demand for food and other resources. It is important that we all work together to find ways to do so in a sustainable way.

the same time, the fact that the *Journal* is a journal of the American Psychological Association, the largest and most prestigious of the professional associations, adds to its authority.

There are other journals that are devoted to the study of the history of psychology, but none of them has the same reputation as the *Journal of the History of Psychology*. The *Journal* is the only journal of the field, and it is the only journal that is published by a professional association. This gives it a unique position in the field.

The *Journal* is a journal of the American Psychological Association, the largest and most prestigious of the professional associations. The *Journal* is the only journal of the field, and it is the only journal that is published by a professional association. This gives it a unique position in the field.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.2 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One way to meet this demand is to increase the amount of food that is produced. This can be done by using more land for agriculture, by using more fertilizers and pesticides, and by using more water.

Another way to meet this demand is to reduce the amount of food that is wasted. This can be done by using less food, by using food more efficiently, and by reducing food losses.

There are many ways to meet the world's growing demand for food and other resources. It is up to us to decide which way is best.

One way to decide is to look at the costs and benefits of each option. This can be done by comparing the costs and benefits of different options.

Another way to decide is to look at the environmental impacts of each option. This can be done by comparing the environmental impacts of different options.

There are many other ways to decide which way is best. It is up to us to decide which way is best.

One way to decide is to look at the social impacts of each option. This can be done by comparing the social impacts of different options.

Another way to decide is to look at the economic impacts of each option. This can be done by comparing the economic impacts of different options.

There are many other ways to decide which way is best. It is up to us to decide which way is best.

One way to decide is to look at the health impacts of each option. This can be done by comparing the health impacts of different options.

Another way to decide is to look at the cultural impacts of each option. This can be done by comparing the cultural impacts of different options.

There are many other ways to decide which way is best. It is up to us to decide which way is best.

One way to decide is to look at the political impacts of each option. This can be done by comparing the political impacts of different options.

Another way to decide is to look at the legal impacts of each option. This can be done by comparing the legal impacts of different options.

There are many other ways to decide which way is best. It is up to us to decide which way is best.

the fact that the *Journal of the American Medical Association* (JAMA) has been the most widely cited journal in the field of medicine for over a century.

The *JAMA* is a peer-reviewed journal that publishes research, clinical practice, and commentary on a wide range of medical topics. It is published weekly by the American Medical Association (AMA).

The *JAMA* is known for its high standards of scientific rigor and its commitment to providing the most up-to-date and accurate information to the medical community.

The *JAMA* is also known for its commitment to diversity and inclusion, and for its efforts to address the needs of underserved populations.

The *JAMA* is a valuable resource for medical professionals, researchers, and patients alike. It provides a comprehensive overview of the latest research and clinical practice in the field of medicine.

The *JAMA* is also a valuable resource for the general public, as it provides information on a wide range of medical topics in a clear and accessible format.

The *JAMA* is a testament to the dedication and hard work of the medical community, and to the commitment of the AMA to providing the best possible care for its members and the public.

The *JAMA* is a journal that is truly a reflection of the medical profession, and of the dedication and hard work of its members.

The *JAMA* is a journal that is truly a reflection of the medical profession, and of the dedication and hard work of its members.

The *JAMA* is a journal that is truly a reflection of the medical profession, and of the dedication and hard work of its members.

The *JAMA* is a journal that is truly a reflection of the medical profession, and of the dedication and hard work of its members.

The *JAMA* is a journal that is truly a reflection of the medical profession, and of the dedication and hard work of its members.

The *JAMA* is a journal that is truly a reflection of the medical profession, and of the dedication and hard work of its members.

The *JAMA* is a journal that is truly a reflection of the medical profession, and of the dedication and hard work of its members.

The *JAMA* is a journal that is truly a reflection of the medical profession, and of the dedication and hard work of its members.

The *JAMA* is a journal that is truly a reflection of the medical profession, and of the dedication and hard work of its members.

The *JAMA* is a journal that is truly a reflection of the medical profession, and of the dedication and hard work of its members.

The *JAMA* is a journal that is truly a reflection of the medical profession, and of the dedication and hard work of its members.

The *JAMA* is a journal that is truly a reflection of the medical profession, and of the dedication and hard work of its members.

The *JAMA* is a journal that is truly a reflection of the medical profession, and of the dedication and hard work of its members.
